Ordering your bulk material for delivery

1. How much do you need?
2. When do you want it delivered?
3. Where do you want it dumped?

-Our trucks must stay on a hard surface.

-We will not pull on driveways that are less than 1 year old.

-We cannot pull on property that is not owned by you without their written permission.

-Give dump instructions from the perspective of standing in the street, looking at your house ("Top left of drive" or "On right, under basketball hoop")

-We cannot split dump loads with a neighbor, as we have no way to gauge how much is being dumped in a particular location.

4. Please give us a cell phone number to reach you in case our driver has questions at the time of delivery.

5. If you are having gravel or sand delivered, we will charge your credit card after we load up the truck since it is sold by weight.

Due to changing fuel prices, products & deliveries may have an additional fuel surcharge.

How to figure out mulch bulk material you need:

Length (in feet) x Width (in feet) = your square footage

Total Square Feet ÷ 12 x Depth (in inches) = total cubic feet

Total Cubic Feet ÷ 27 = Cubic Yards

BASIC FORMULA: L' x W' ÷ 12 x D" ÷ 27 = Cubic Yards

Most sand & gravel weigh approximately 1.2 ton per cubic yard.

If you need 3 cubic yards of #57 limestone, it would weigh about 3.6 ton.

(#411 & #304 are both 1.3 ton per cubic yard)
